

BAKER COLLEGE
STUDENT LEARNING OUTCOMES

NUR3510 Information Management in Healthcare
3 Semester Credit Hours

Student Learning Outcomes and Enabling Objectives

1. Explain technology in nursing practice.
 - a. Define specific terms necessary to understand the use of informatics within the healthcare setting.
 - b. Discuss the principle of healthcare documentation and workflow.

2. Evaluate the role of databases for improving patient care outcomes.
 - a. Explain clinical information systems' safety to support clinical decision making.
 - b. Generate evidence for clinical decision making.
 - c. Discuss how the interdisciplinary team shares information for providing safe and effective patient care.
 - d. Identify the role of informatics in empowering the consumer as partner in healthcare.

3. Evaluate legal and ethical implications related to informatics in today's healthcare environment.
 - a. Explore legislative aspects and regulatory requirements.
 - b. Analyze the ethical and legal issues.
 - c. Describe the relationship between information literacy and improvements in patient outcomes.

Big Ideas and Essential Questions

Big Ideas

- Informatics in nursing practice
- Informatics and ethical and legal issues

- Nursing informatics and patient outcome
- Interprofessional Collaboration and Practice Workflow

Essential Questions

1. How do nursing informatics and technologies positively impact quality and safety in healthcare?
2. How does the nurse use informatics and healthcare technologies to promote decision making?

These SLOs are not approved for experiential credit.

Effective: Fall 2023
